Release notes

# New features and improvements

## New features

- Review Improvements to XFDF annotations
  - Extracted annotations from a PDF preserve now new lines and the following text formats: bold, italics and underlined (only text-decoration:underline)
  - Known limitations:
    - Underlined text is only supported for text-decoration: underline parameters
    - New lines are sometimes not preserved when they are added between text with different formats. This is due to the way the XFDF file is created, which doesn't always use standard tags for new lines.
- **Enfocus Review Viewer now available on mobile**

Our advanced Review viewer is now available on mobile devices. Customers can view and approve proofs directly from their phone or tablet, making it easier than ever, no matter where they are!

This was our biggest request on the Features page on My Enfocus. Continue to hear your voice! <https://my2.enfocus.com/en/review/featurerequests>
