

# **Griffin and Griffin Auto 25.07**

**Release notes**

## New features and improvements

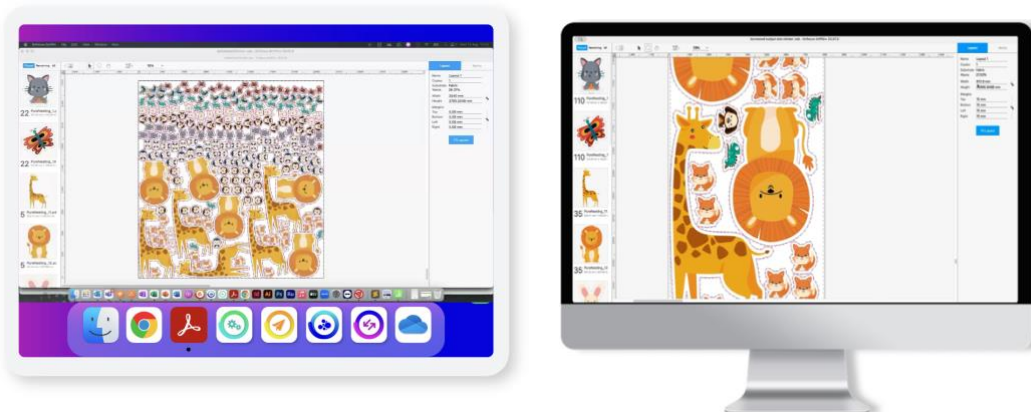

This release will introduce new features and improvements, including:

### Griffin+

We're introducing **Griffin+**, the most powerful upgrade yet to the Griffin platform. With this release, Griffin+ expands product handling capacity from **100 to 500**, giving you the freedom to optimise like never before. The maximum output size has also been dramatically increased—from **10m<sup>2</sup> to 50 x 10 metres**—empowering you to deal with massive output sheets and reels.

On top of that, Griffin+ now delivers versatile **reporting capabilities** in **XML, JSON, PDF, and Tiled solutions**, allowing you to understand what savings have been made by Griffin+ and ensuring seamless integration into your workflows.

Griffin+ isn't just an upgrade—it's the next level of performance, scale, and efficiency.

### Stability Improvements

- **Fixed – GN-390** Exporting for print doesn't recognize die-lines in some scenarios and exports them as regular objects instead of removing them
- **Fixed – GN-71** In some rare cases with nearly rectangular artworks, grid nesting produced overly wasteful or overly complex nested layouts
