

Griffin and Griffin Auto 26.03

Release notes

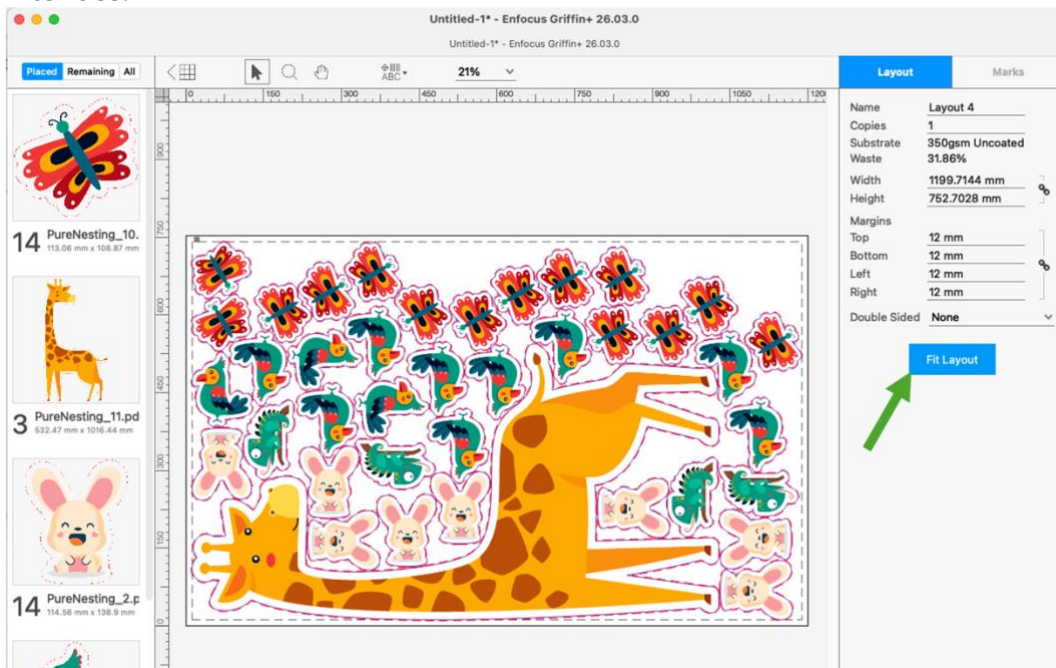

New features and improvements

This release will introduce new features and improvements, including:

Griffin Auto API can now edit layout properties, change layout work style, and fit layouts to content

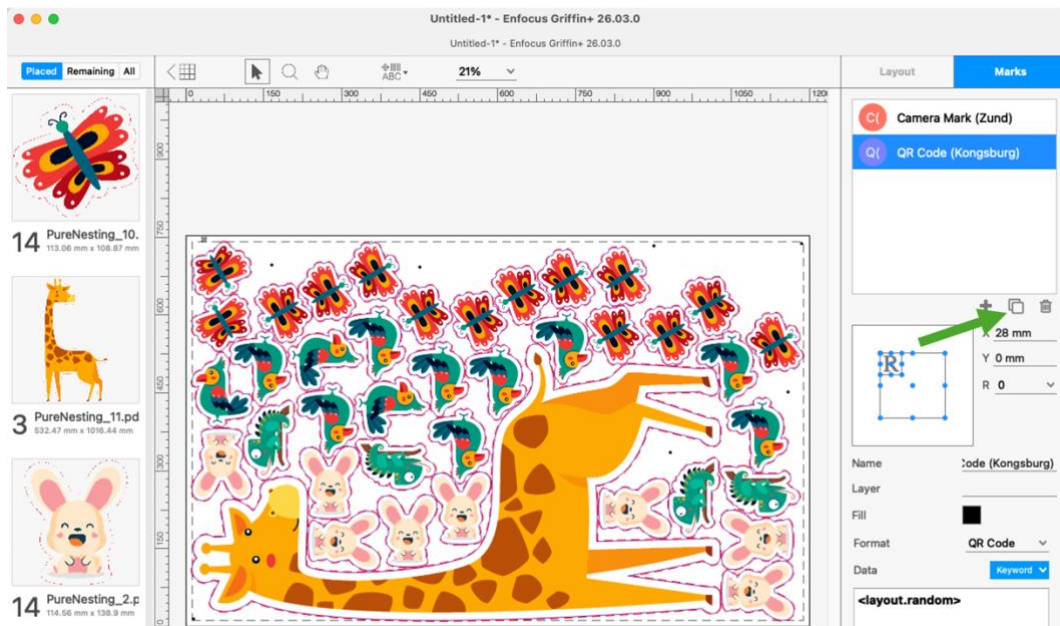

We have now enabled greater control over layouts after they are generated by the nesting tool, Griffin Auto customers gain a powerful new level of flexibility, allowing them to fine-tune results by changing the layout work style and fit layouts to content and optimize production with confidence through the API interface.

Mark usability enhancements: duplicating live marks, duplicating mark presets

We now have the ability to duplicate marks streamlining the process of manually placing camera marks and enables quick creation of consistent mark presets. This can be applied in the final layout view or in the Marks presets area.

Stability Improvements:

- **FIXED – GN-406** Some large JPEGs rendered slowly in Griffin
- **FIXED – GN-490** Substrate margins were not always populating when launching the Nesting Tool
