

# Adding PitStop Preflight to your Job Onboarding process

**Loic Aigon**

PitStop Product Manager

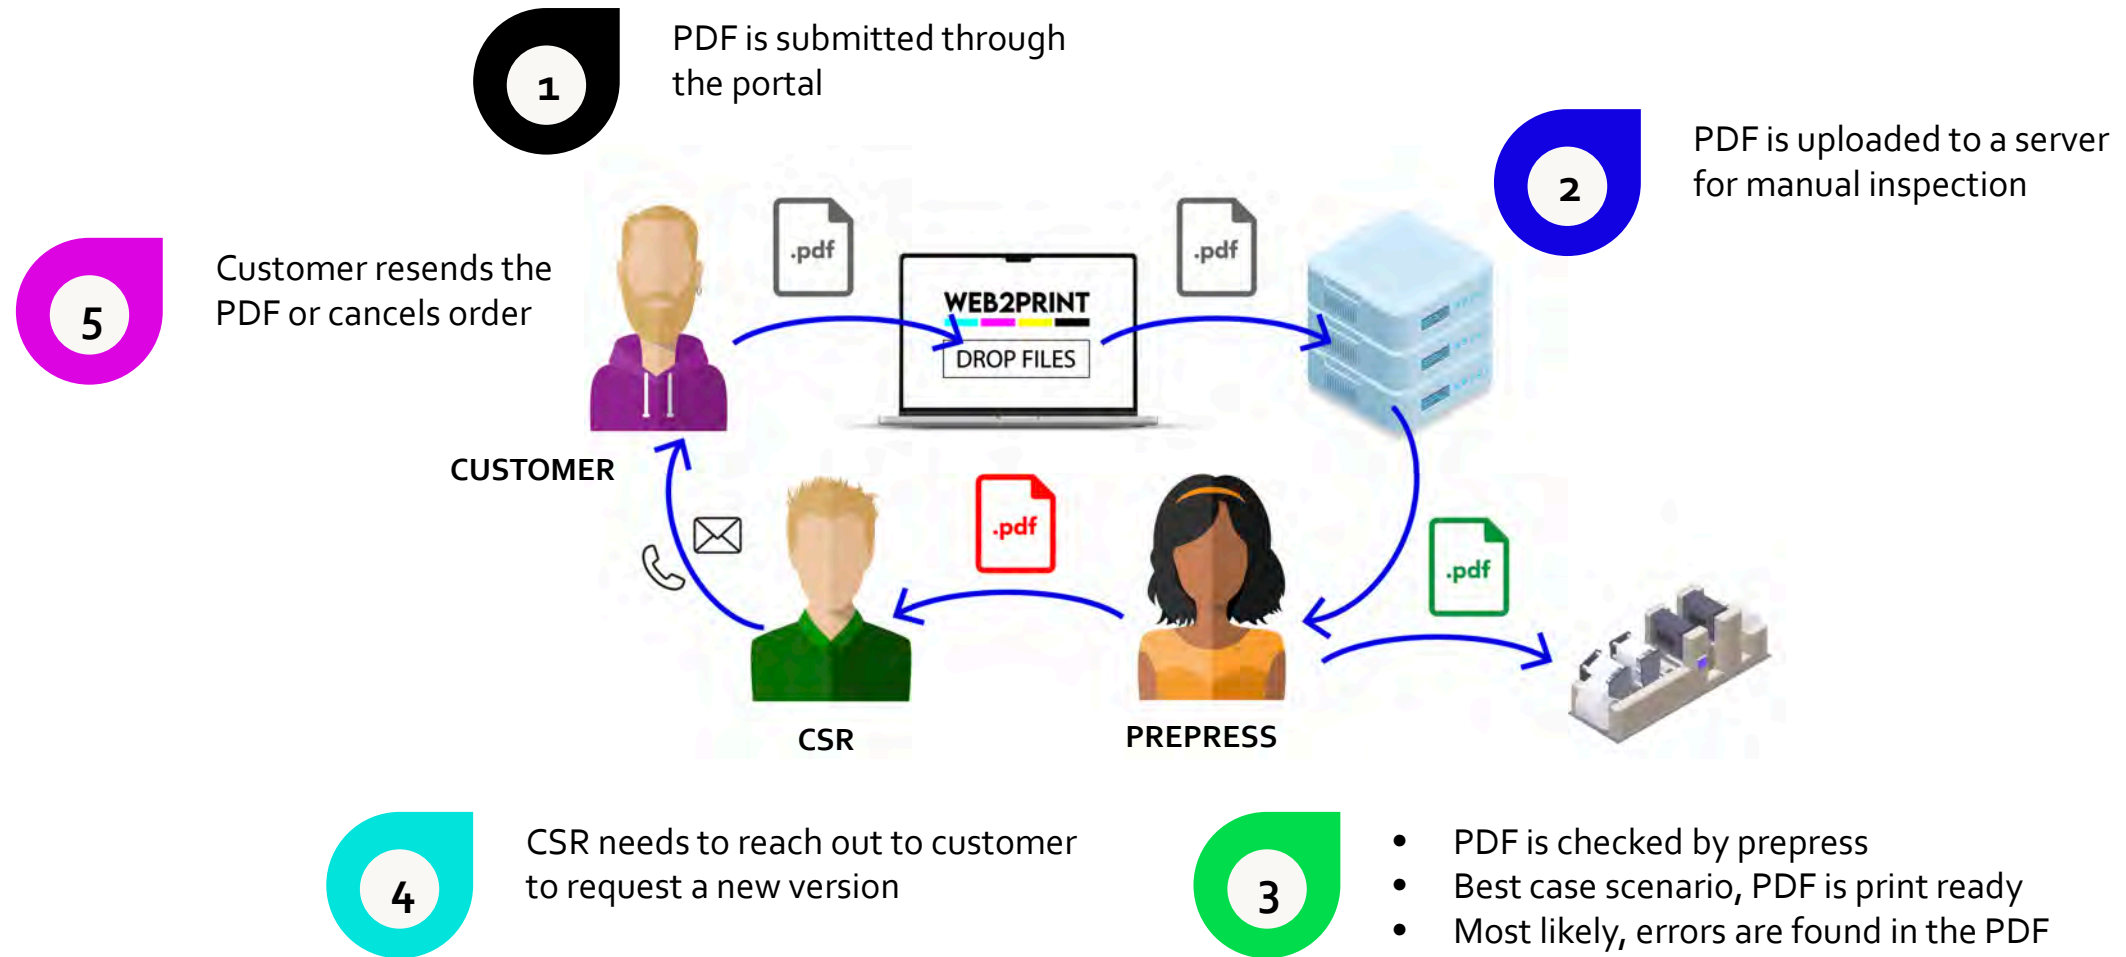

**Angelo Manno**

Global OEM & Strategic Accounts Manager

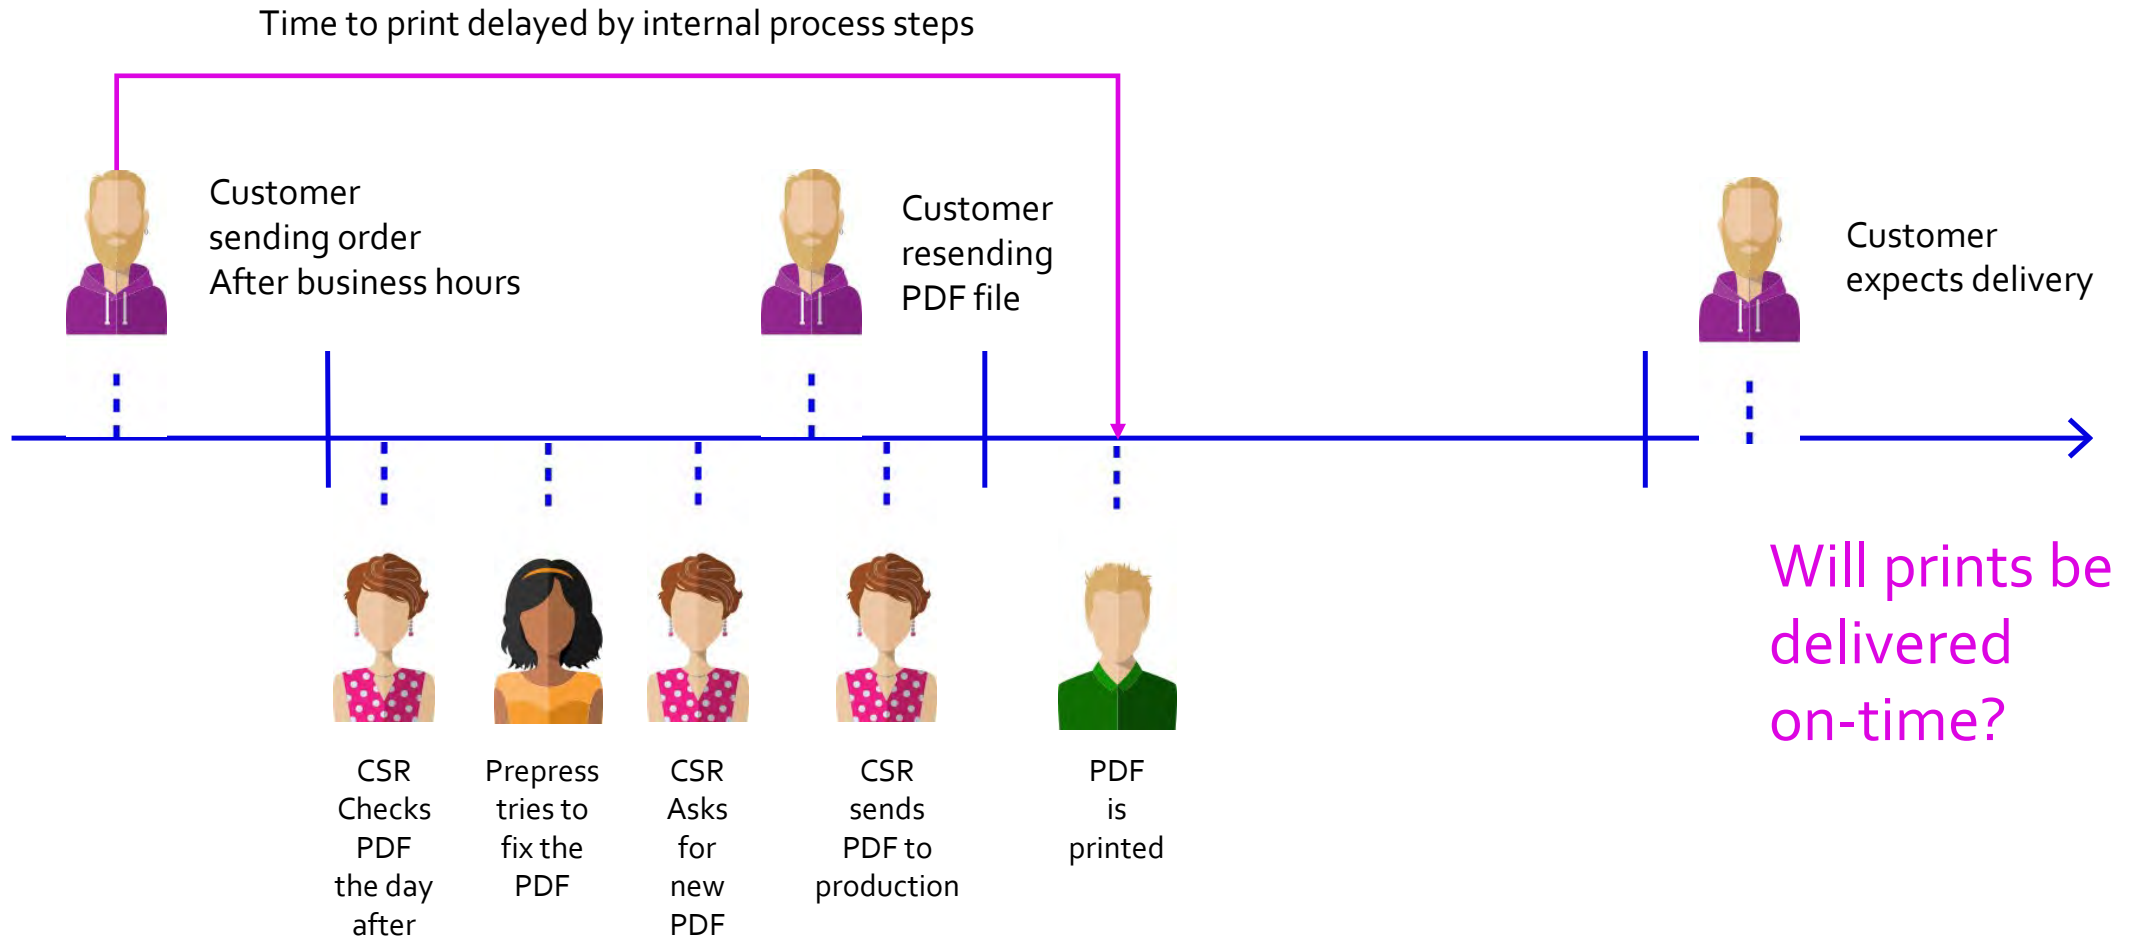

# A typical job onboarding process

High risks for losing precious time

# The pain-point

# Costly consequences

The later PDF-problems are found,  
the higher the cost to resolve it!

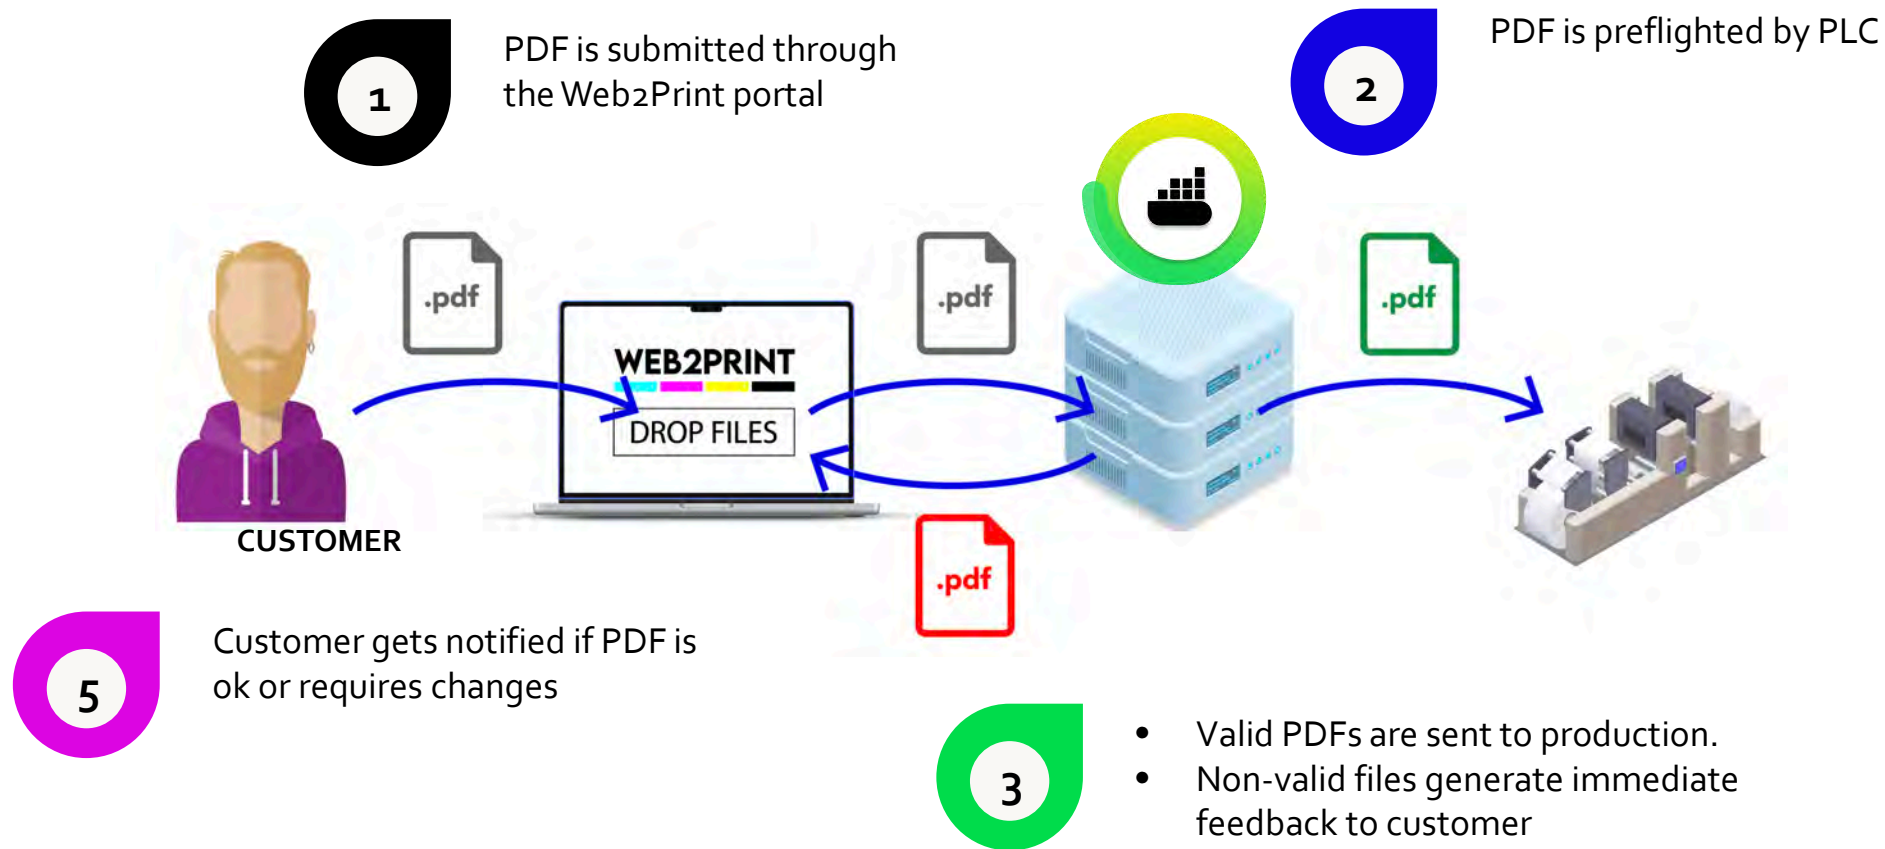

# **PDF Preflight for Web Portals**

# Checking files on submission

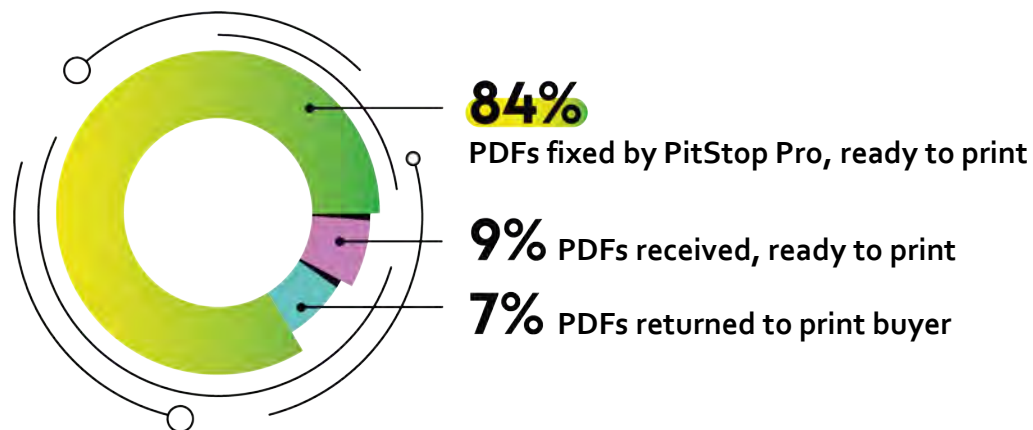

**PitStop, a life saver for  
thousands of customers**

# PitStop, a life saver – 24/7/+25 years

Did you know?

Print buyers

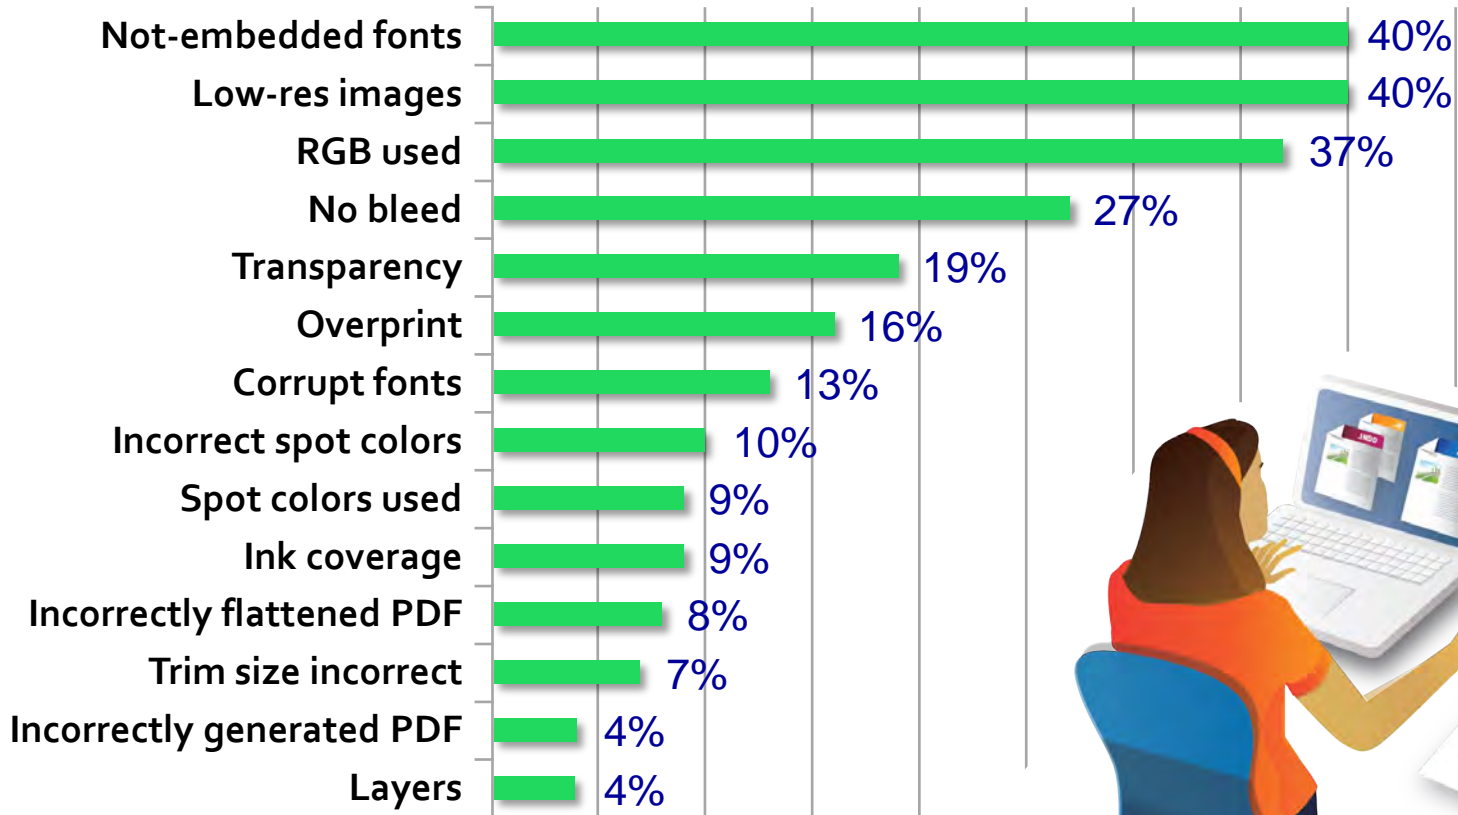

Print Service Provider

- Image resolution
- RGB objects
- Font issues
- Missing bleed
- Ink coverage
- Knockout and overprint
- Rich black
- Transparency

# Still overcoming well known challenges

Making sure received PDFs are print-ready  
and will not interfere with production

Print buyers

Print Service Provider

# PitStop product family

## PITSTOP PRO

### Manual preflight, correction and editing

- Adobe Acrobat plug-in
- Licensed to a host computer
- Perpetual and subscription
- Installers for Mac and Windows

## PITSTOP SERVER

### Automated preflight and correction

- Stand-alone application
- Hot folders
- Command Line Interface (CLI)
- Tight integration with Switch
- Third-party integration using CLI
- Licensed to a host computer
- Perpetual and subscription
- Installers for Mac and Windows

## PITSTOP LIBRARY

### Automated preflight and correction

- Software Development Kit (SDK)
- Libraries with an ANSI C interface, header files and documentation
- Embed in own developed application
- For OEM vendors and pro-users
- Licensing is managed by OEM, agreement and/or EULA
- Various license and pricing models
- Supports Mac, Windows and Linux

## PITSTOP LIBRARY CONTAINER

### Automated preflight and correction

- Docker image with a Linux wrapper
- Controlled using a REST API
- Built to ease integrations with cloud-/web-based applications
- Download from AWS ECR repository
- For OEM vendors, and users with development skills
- Host computer independent license
- Subscription based
- Supports Mac, Windows and Linux

Used by +150,000 users, worldwide

**PITSTOP**  
**LIBRARY**  
**CONTAINER**

# **Introducing the PitStop Library Container**

# PitStop Library Container answers needs

Add preflight to web-based applications

Intercept problems upstream

Provide quick feedback to print buyers

Manage production load and peaks

Install and scale anywhere, anytime

Carry heavy development load

# DEMO

# Innovative Design

# Cloud releases

Cloud releases every 6 weeks

New image posted on Amazon ECR every first Tuesday of the release week number  
(ex: week 15 > Apr 9<sup>th</sup>)

No automatic update (free to decide when to upgrade)

# Leveraging PitStop Library

The engine for all Enfocus PDF processing solutions

Placed in a Docker image  
with a REST API

Eases integration and access,  
using HTTP requests and responses

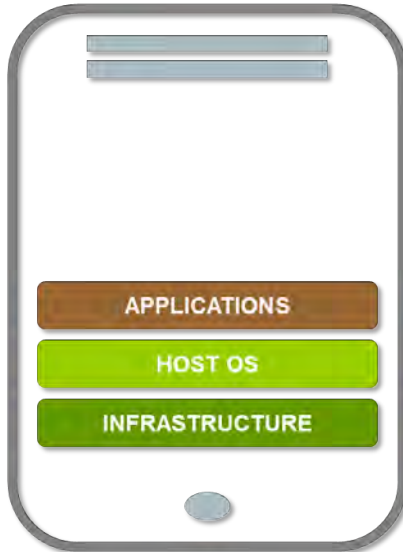

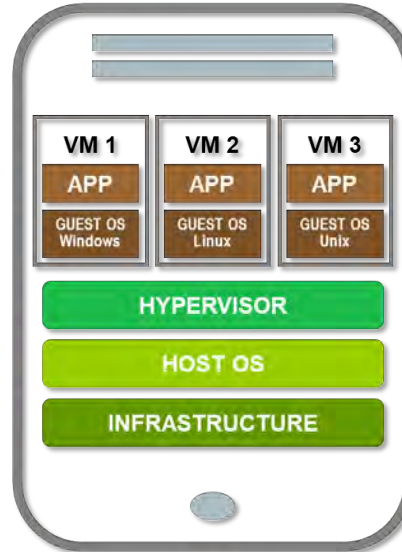

# Docker container in a nutshell

PHYSICAL SERVER

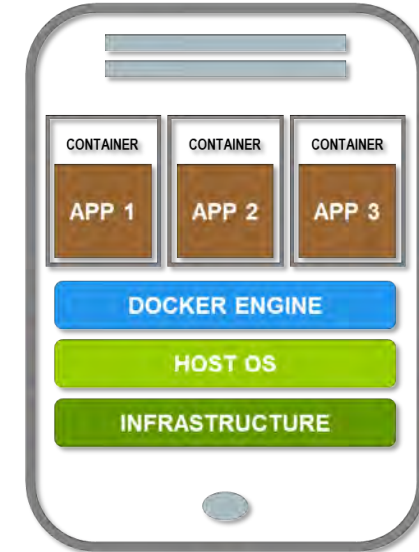

- The physical computer
- Includes motherboard, CPU, memory, network, storage, etc.
- Runs the software, including OS, libraries and applications
- Utilized for computing needs

VIRTUAL MACHINES

- Installed on physical computer
- Emulates a physical computer
- Hypervisor creates and runs VMs
- Runs its own programs
- Each VM require its own OS
- Needs time to boot
- Uses a lot of system resources

DOCKER CONTAINERS

- Installed on physical computer
- Doesn't require its own OS
- Includes everything for an application to run
- Platform and OS independent
- Fast spin-up/spin-down
- The standard platform to quickly build, test, deploy, run, update and manage containers

# Embracing the Docker platform

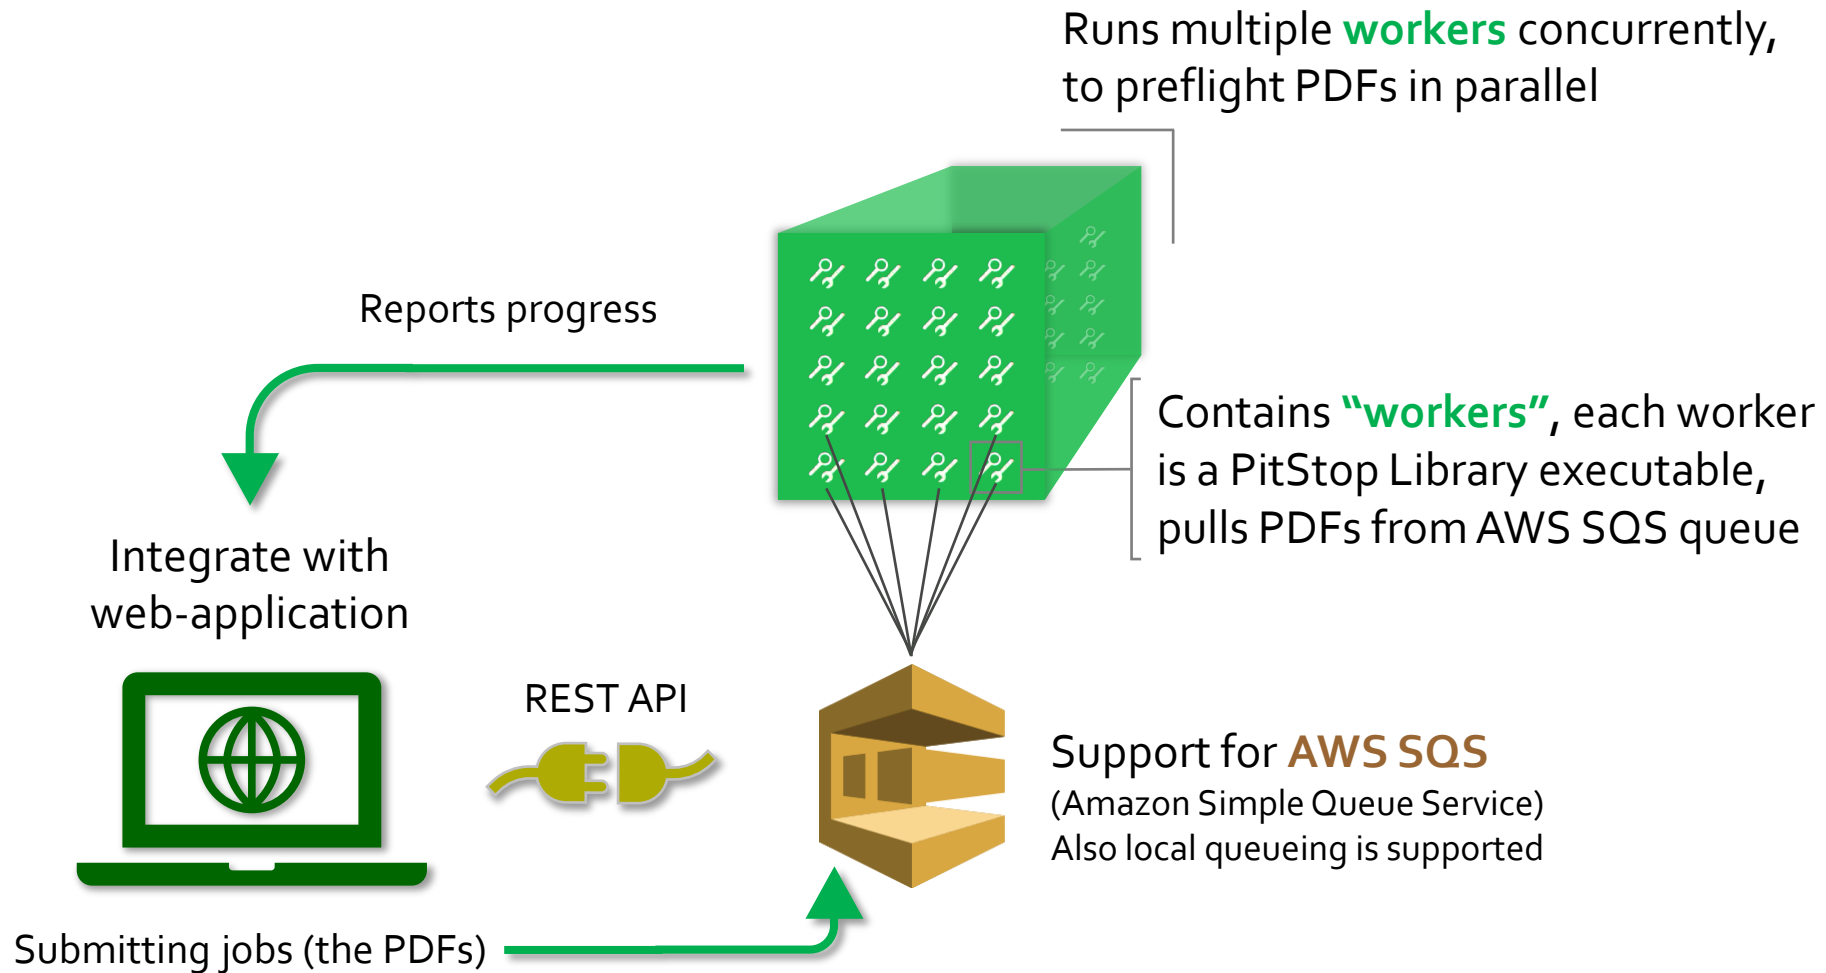

# Taking full advantage of containers

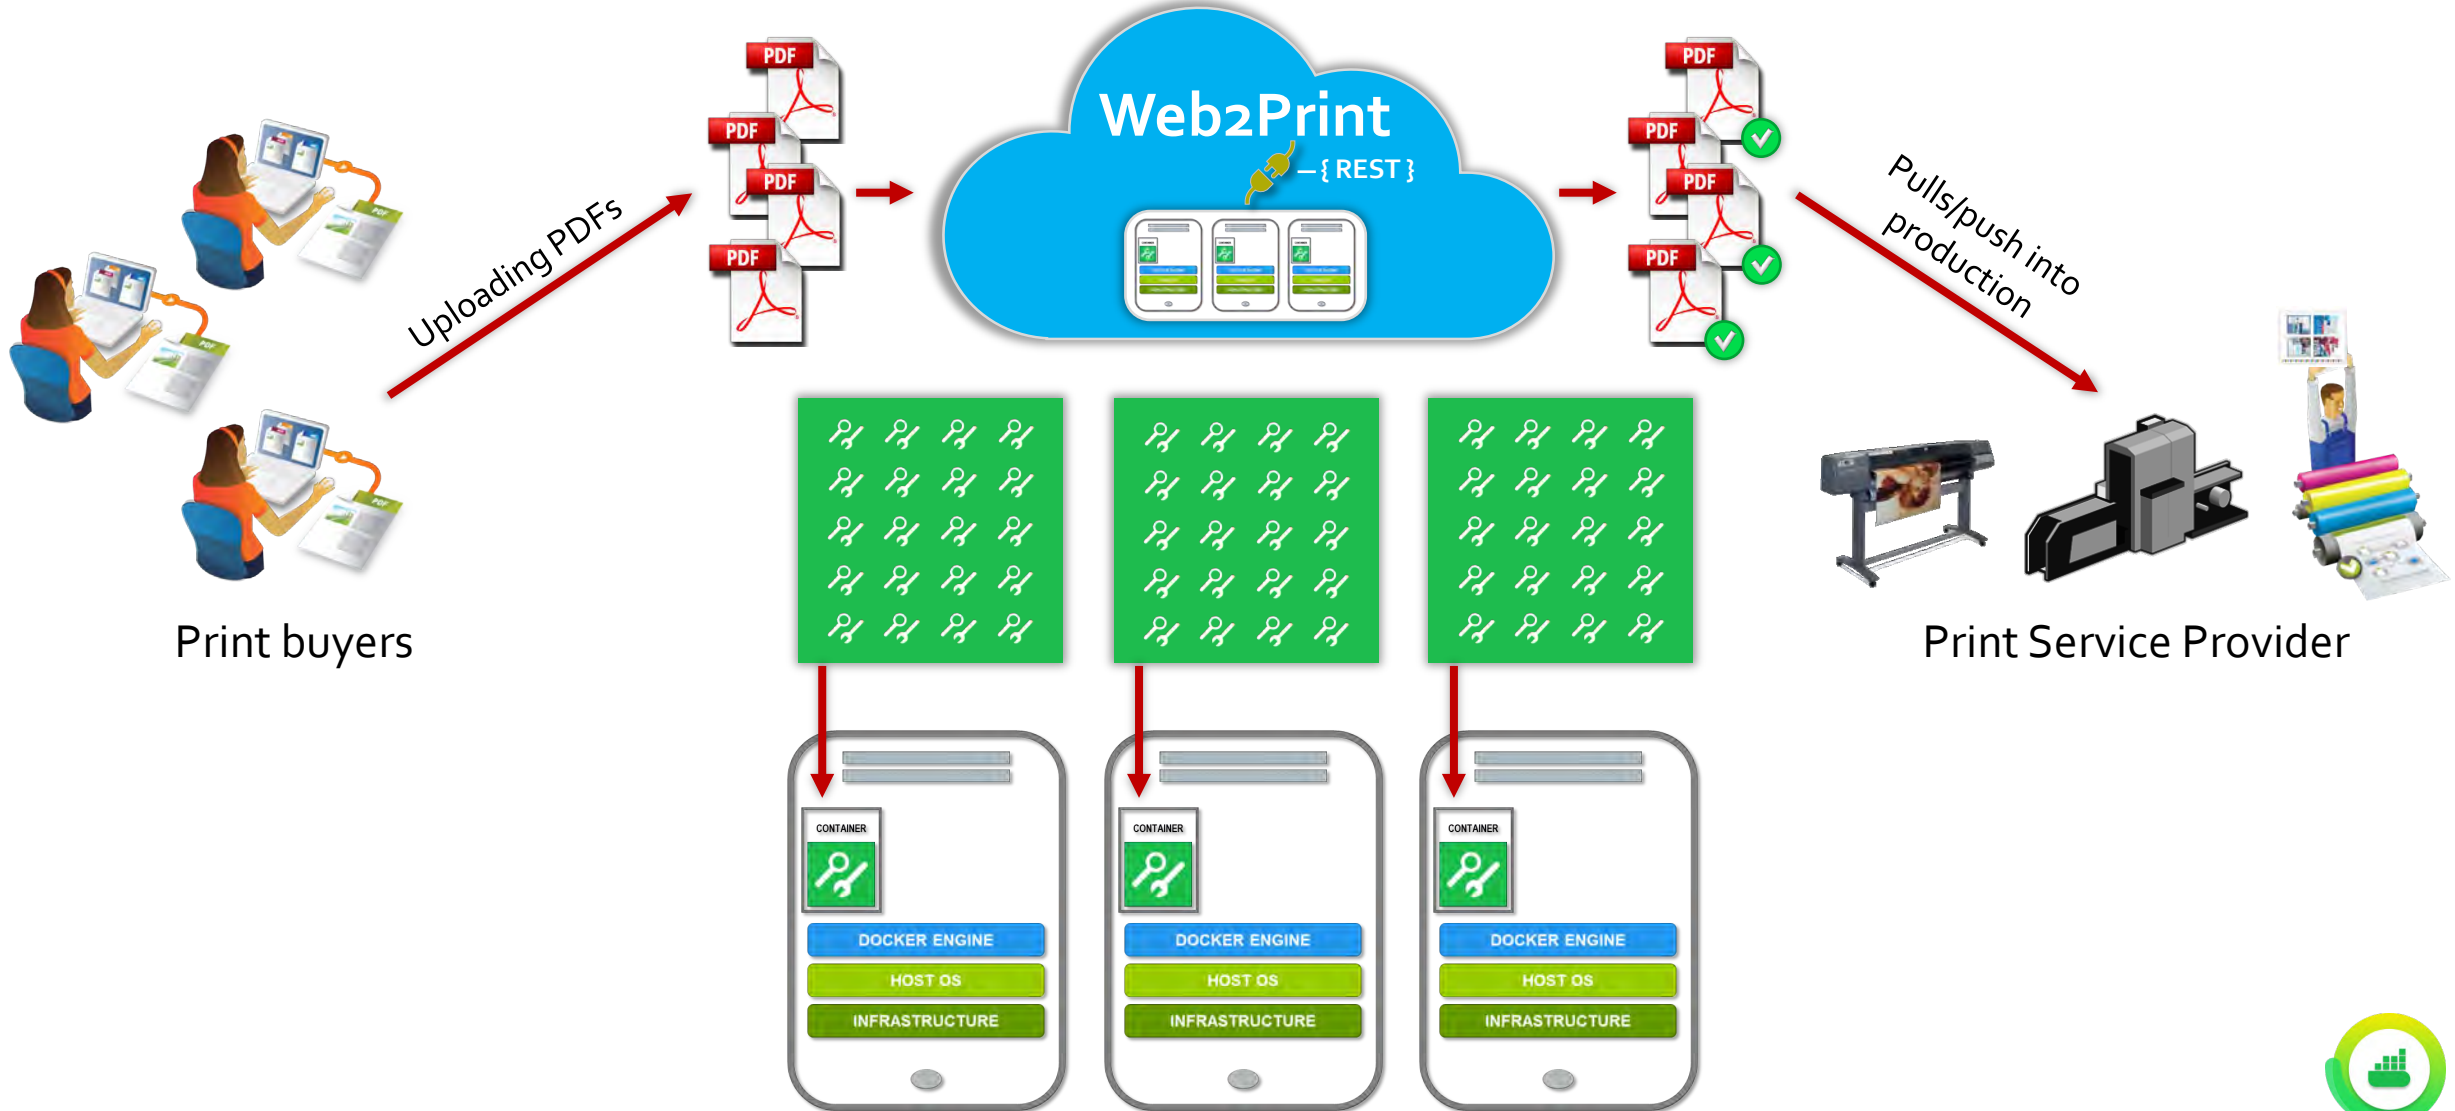

# A closer look at the container

# Designed for the Cloud

# Deploy anywhere you see fit

- Rely on managed services from cloud service providers
- Connected servers (cluster) provide great flexibility, scalability and redundancy
- Hardware and software resources are shared
- Cost effective

- Cloud setup or private internal network
- When business requirement prevent public cloud service to be used
- Hardware and software resources are dedicated
- Complete control by a single organization
- High security

- Deploy on-premise when no cloud access is required
- One or more servers, when license permits
- Full control and security
- When adding preflight services to internal production processes

# Be in control how you utilize your available resources efficiently

Start – Stop – Restart  
instances

Spin-up – Spin Down  
instances

# Working with the API

# About processes prioritization

All endpoints (/job, /pdf2image...) are hosted on the same Docker Image

PLC with Single Instance License will process all requests with no prioritization

PLC with Multi-Instances License allows dispatching jobs per request type

# **Flexible Licensing**

# Flexible licensing

## Volume based subscription

Single or Multi instance

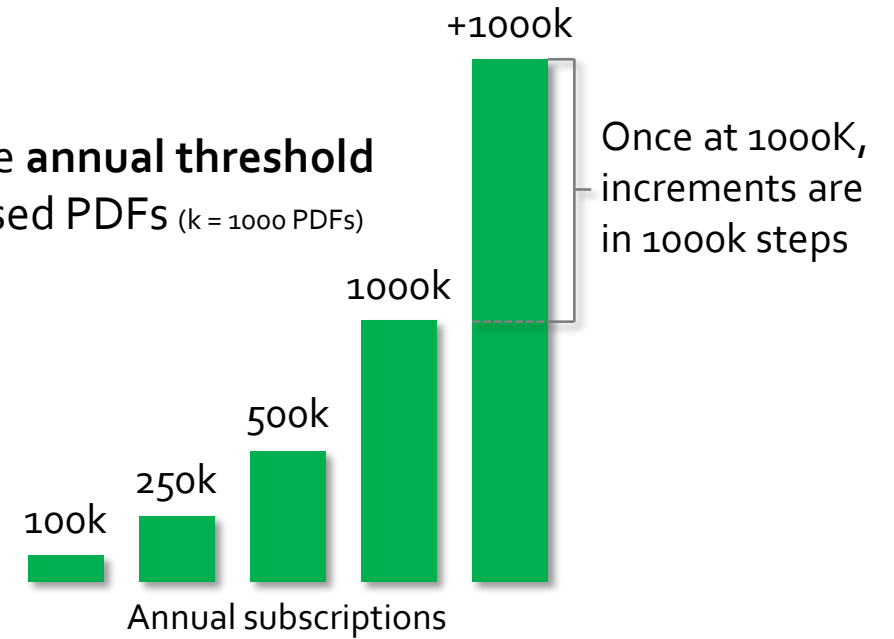

Developer and Production

Volume upgrades

No host activation

Defines the **annual threshold** for processed PDFs (k = 1000 PDFs)

## Notifications are sent

when in reach and going over the annual threshold

**No production interrupts!**  
Continue processing when going over the annual threshold, but immediate volume upgrade is required

# Flexible licensing

## Volume based subscription

Single or Multi instance

Developer and Production

Volume upgrades

No host activation

What is a transaction?

**1 single process = 1 transaction**

What is a process?

**A file preflight = 1 process**

**An image generation = 1 process**

# Flexible licensing

Volume based subscription

**Single or Multi instance**

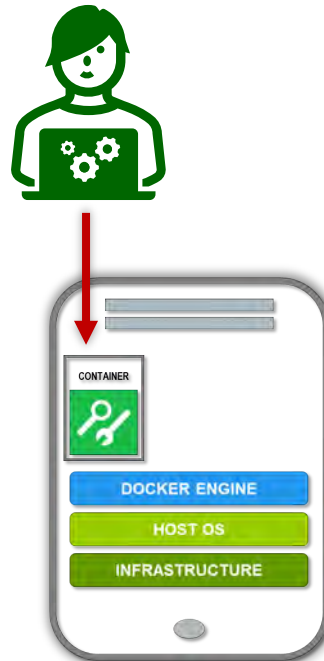

Developer and Production

Volume upgrades

No host activation

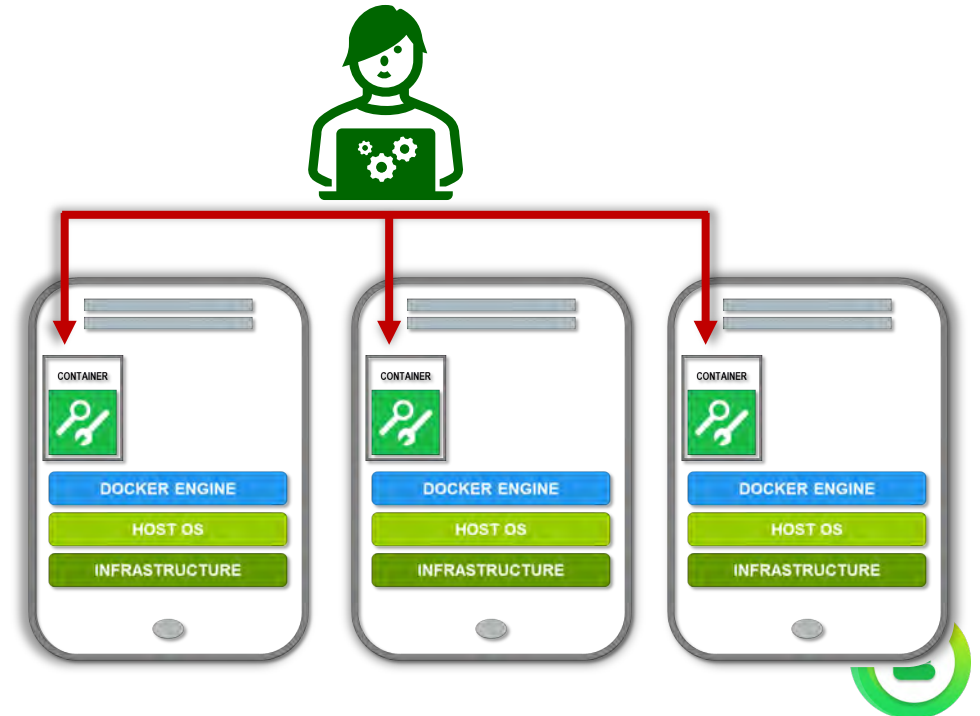

## Single instance license

- Available for **100K and 250K** licenses
- Run only one PitStop Library Container
- Process PDFs in parallel
- No load-distribution to other servers
- No fault-tolerance

## Multi instance license

- Available for **100k and up**
- Run multiple PitStop Library Containers
- Process PDFs in parallel
- Load-distribution to other servers, clusters and/or VMs
- Provides fault-tolerance
- Manage production and peak requirements
- Possible to upgrade from Single instance

# Flexible licensing

Volume based subscription

Single or Multi instance

**Developer and Production**

Volume upgrades

No host activation

**Development versus production,  
obtain licenses for both**

## Developer license

- Isolate development from production system
- Implement, test, maintain API calls and dev code
- Test container updates
- Test preflight profiles and Action Lists
- Port to production system once tested and confirmed
- Single and Multi-instance
- Conveniently priced

## Production license

- Is any of the Volume licenses
- Isolate production from development system
- Only run tested updates and implementation
- Avoid production interrupts

# Flexible licensing

Volume based subscription

Single or Multi instance

Developer and Production

**Volume upgrades**

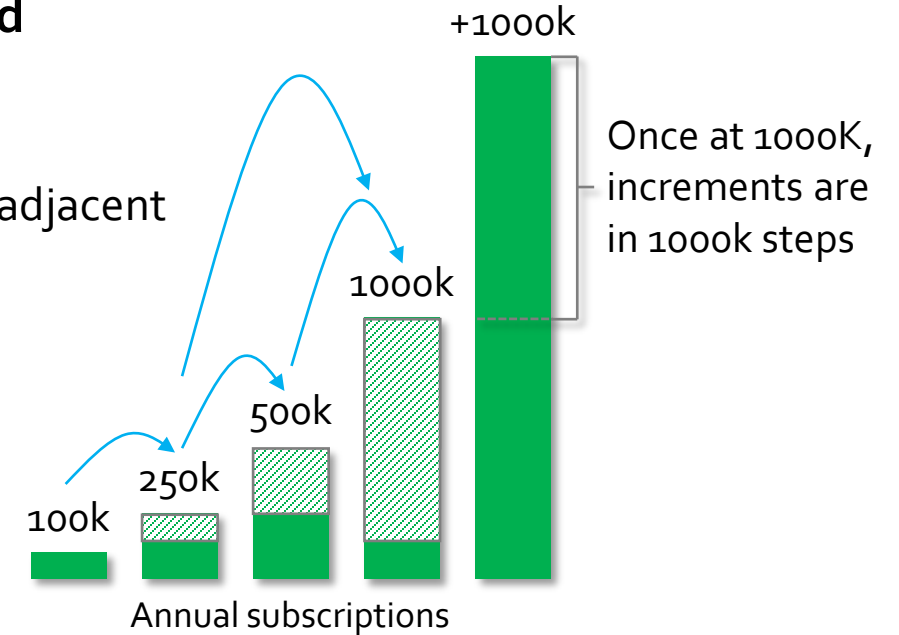

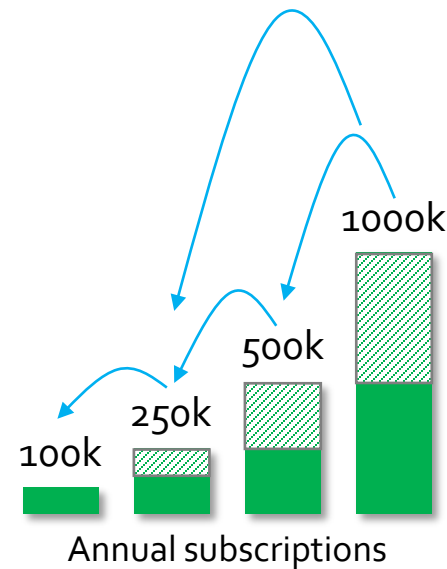

No host activation

Managing **overuse** when going over the **annual threshold**

**Upgrade** is immediate to adjacent or any other volume level

- Price is the difference between two licenses

**Downgrade** when annual threshold should be lower

- At renewal time of current license
- New Volume license is the new price

# Flexible licensing

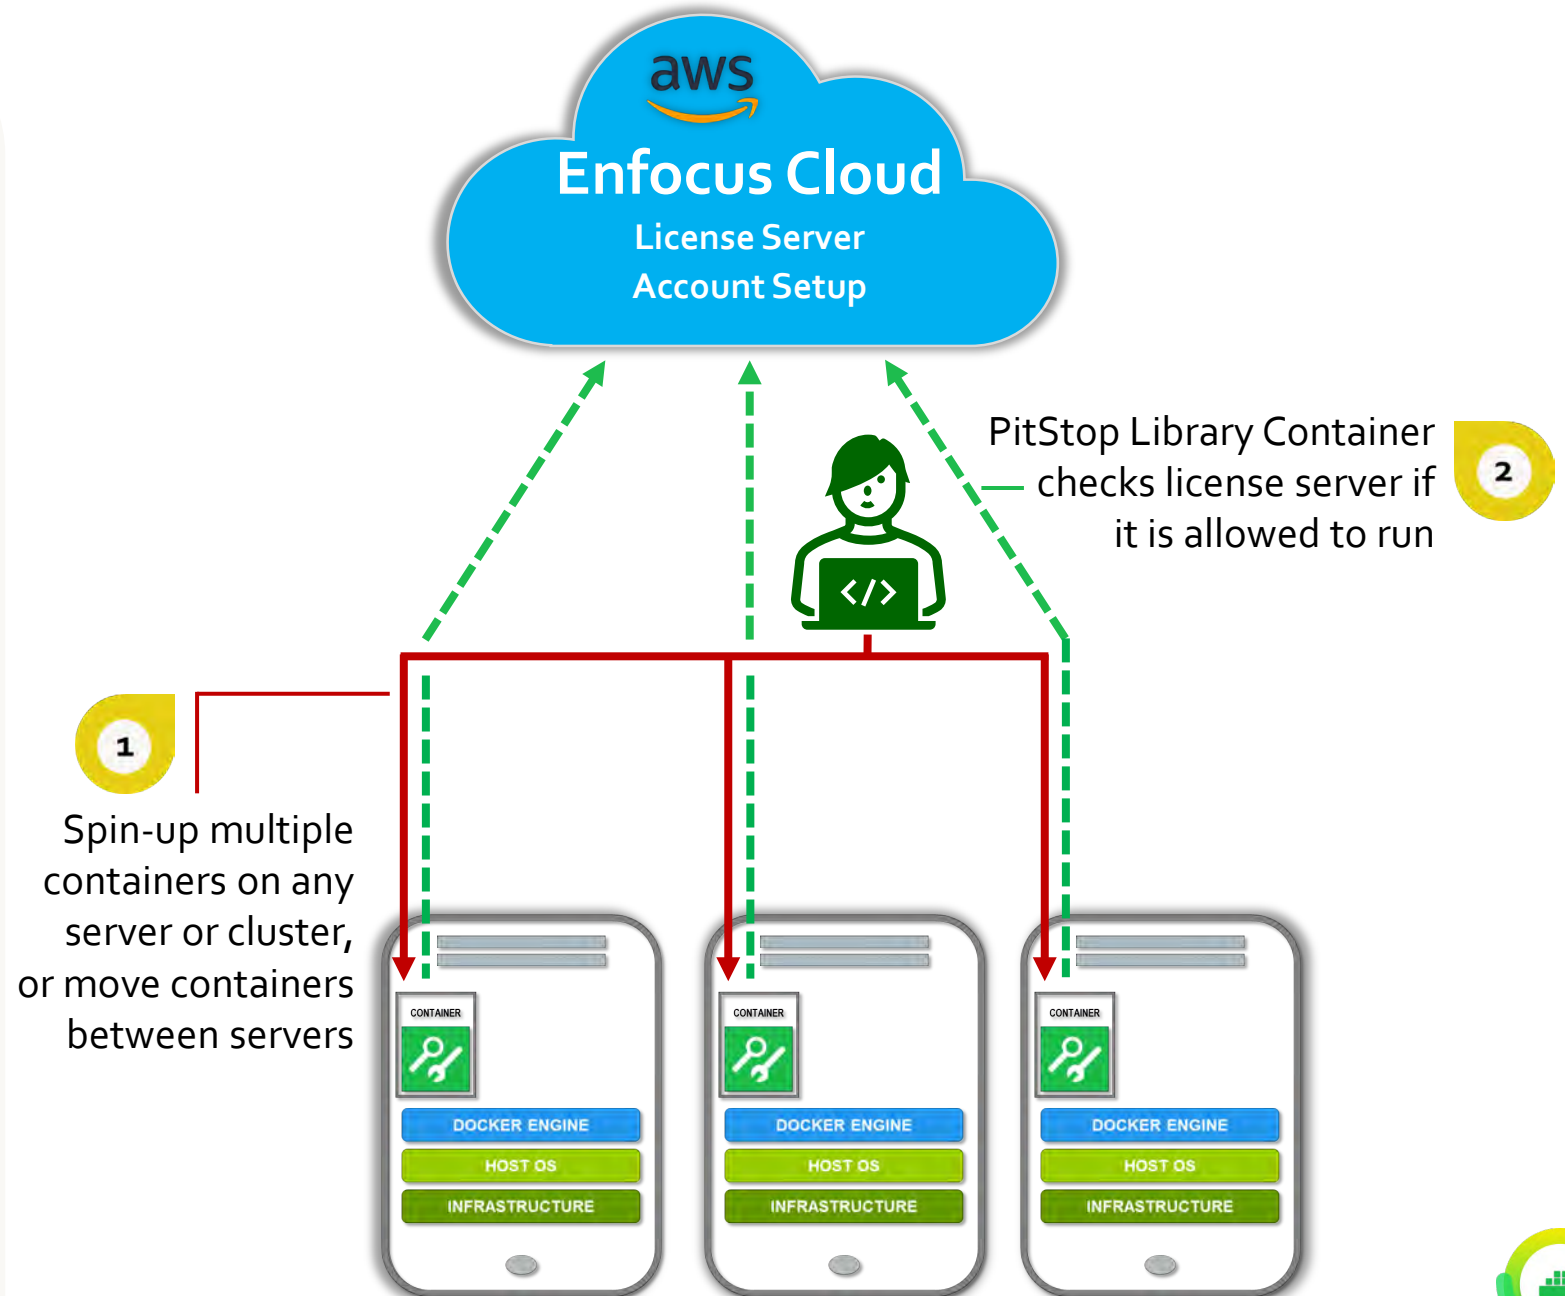

Volume based subscription

Single or Multi instance

Developer and Production

Volume upgrades

**No host activation**

# Benefits

ENFOCUS

# PitStop Library Container answers needs

Add preflight to web-based applications

Intercept problems upstream

Provide quick feedback to print buyers

Manage production load and peaks

Install and scale anywhere, anytime

Carry heavy development load

# PitStop Library Container benefits

Add preflight to web-based applications

Future proof investment – Docker – REST API – integrate with one or multiple applications – proven

Intercept problems upstream

Assure delivery times – avoid unnecessary costs

Provide quick feedback to print buyers

Inform using reports – improve customer satisfaction

Manage production load and peaks

Fast and unrestricted spinning up/down of containers – control costs

Install and scale anywhere, anytime

Flexible – choice of platform and OS – save costs

Carry heavy development load

Reduce R&D costs – ease integration – faster time to product

**What will you  
receive?**

# What will you receive?

POSTMAN

- An API platform for building and using APIs
- Used to write functional tests, integration tests, regression tests, and more

- AWS ECR credentials, to obtain the Docker image
- Installation Guide (including samples and test files)
- Swagger API documentation, embedded in container
- End User License Agreement (EULA)
- docker-compose.yml file, to run Docker containers
- POSTMAN file, to test API calls ([www.postman.com](https://www.postman.com))
- Equipment token, required for transaction logging
- Cloud account number, links thePitStop Library Container license to you as the user
- Download link to default preflight profiles, Action Lists and preflight report template

**PITSTOP  
PRO**

# Do you use PitStop Pro?

- Needed to create and modify your preflight profiles and Action Lists, used with PitStop Library Container
- Enables you to verify why a PDF file failed the PitStop Library Container preflight
- Smart Preflight using variables
- Provides extensive manual and automated editing capabilities
- Corrects typical mistakes such as printer marks and missing bleed
- Provides Certified PDF capabilities
- Provides production insights using free dashboards

# Interested in more info or a trial?

The screenshot shows the ENFOCUS website's contact page. At the top, the ENFOCUS logo is on the left, and navigation links for 'PDF Software' and 'More' are on the right. Below the logo, there are links for 'Home' and 'Contact'. The main heading is 'Contact'. The form includes a dropdown menu for 'What is the nature of your question?' with 'Sales' selected. Below this are text input fields for 'Your name \*' (containing 'John Carpenter') and 'Your email address \*' (containing 'jc@plcprinter.com'). A large text area for 'Message \*' is also present. At the bottom of the form is a green 'Submit →' button. A yellow banner at the bottom of the form area states: 'For support and activation related issues, please use our **support portal**.'
