What's new:

/fastlanethenimage

It is now possible to combine a call to /fastlane and a call to /pdf2image using the new /fastlaneThenImage. This will ensure that the two calls are run consecutively. Note that a correct execution of the call will result in two transactions.

```
POST   /fastlanethenimage

This API is used to push jobs for fastlane and then convert into images.
```

To use this method, define your JSON Body request like this example below:
