

PitStop Library Container

2337

Release notes

What's new

To prepare the future of the PitStop Library in the Cloud Ecosystem, we had to dedicate most of our efforts on infrastructure and revamp some code. Therefore, this release provides less features and improvements than usual.

That said, the 2337 release brings enhancements on the PDF2Image module that was part of the previous release.

1. PDF2Image enhancements

PDF2Image Docker Image is available since PLC Version 2331. However, we are still working on improving this tool and as of PLC 2337, you can:

- Set an extra fonts folder using the ExtraFontsFolder parameter.
- Set JPEG Quality using the qualityJPEG parameter.
- Use a Variables Set using the the variableSetURL parameter.
- Set a background color using the the backgroundColor parameter.
- Define a color space using the colorSpace parameter.

Example of a body request using those parameters

```
{
  "inputFileURL": "url",
  "reference": "abc",
  "prerenderActionListURLs": "[url]",
  "restrictingActionListURL": "url",
  "variableSetURL": "url",
  "extraFontsFolderURL": "[url]",
  "jobStatusURL": "http://localhost:8080/result",
  "imageProperties": {
    "type": "JPEG",
    "qualityJPEG": "Medium",
    "progressiveJPEG": false,
    "interlacedPNG": false,
    "colorSpace": "DeviceRGB",
    "backgroundColor": [
      0,
      100,
      50
    ]
  },
  "embedICCPProfile": false,
  "pageRange": "1-5",
  "includeEmptyPages": false,
  "exportOption": "Composite",
  "renderArea": {
    "rectangle": {
```

```
"minX": 5.00008,  
"minY": 4.00008,  
"maxX": 10.00008,  
"maxY": 8.00008  
},  
"pageBox": "TrimBox"  
},  
"imageResolution": 72,  
"imageSize": {  
  "width": 300,  
  "height": 300  
},  
"antiAliasing": false,  
"output": {  
  "targetLocation": "url"  
}  
}
```

2. Vulnerabilities

No vulnerability found in both preflight and PDF2image for PLC 2331.
