Release notes

New features and improvements

This release will introduce a range of new features and improvements, including:

Execute command (v11.2):

Bug fixes:
- **ENFSWAPP-2955:** In Execute Command v11.1, argument %4 lets you pass a password as a property (masked in the UI), but it still appears in plain text in debug logs. This issue has been resolved.
- **ENFSWAPP-3439:** Execute Command app v11.1 failed to process the placeholder variables %1, %2, causing commands that worked in previous versions to break. This issue has been resolved.

HTTP request (v20.6):

Bug fixes:
- **ENFSWAPP-3859:** In HTTP request v20.4 Beta, recurring errors were observed with the error message "Cannot read properties of undefined (reading 'status'). This issue has been resolved now.
- **ENFSWAPP-3901:** Issues with HTTP Request v20.4 under heavy load, causing job creation and path errors; also socket hang-ups and ECONNRESET dataset errors have been resolved.
- **ENFSWAPP-4276:** The Content-Length header was not filled in correctly when using a custom body for the "Request type - POST a body". This could lead to the request being rejected by the server. This issue has been resolved now.
